

## Introducing the

“Keep your roof where it belongs ...on your house”

### TARGET MARKET:

- Homes and businesses in high wind areas
- Anywhere that storms can cause expensive damage

### FEATURES:

- Tested up to over 1000 lbs of lifting force
- Easy to install
- Hidden from view after installation
- May help reduce insurance costs

### PATENT INFORMATION

Patent pending. The patent search was performed by the Mars Rising Network. It was concluded that there is nothing similar to this product on the market, which means this unique device could be used by builders everywhere.

### SUMMARY

Hurricanes and the destruction they cause are a fact of life. When we see the news after a hurricane, the images are generally the frames of houses that have had their roofs blown off.

There isn't much we can do to prevent deadly storms but we can mitigate the damage by exercising precautions.

Introducing the **Hunker Bunker Roof Anchor**. The Hunker Bunker Roof Anchor is an innovative system that helps keep your roof anchored where it should be and not add to flying debris!

Wind uplift force can take some roofs off at around 80 mph which is evident by the damage after storms; this is a frequent occurrence. The **Hunker Bunker Roof Anchor** has been successfully tested up to 1000 lbs. mechanical uplift force. That is 300 lbs. more than some building material minimum requirements!

Lightweight, strong, and affordable, the **Hunker Bunker Roof Anchor** anchors the plywood edge of your roof to the bottom of the truss and out of view.

We can't prevent the often deadly force of nature but we can be better prepared and minimize;

- Loss of life
- Loss of property
- Insurance costs and claims
- Disaster clean-up dollars
- Landfill space, etc.,

...with **Hunker Bunker Roof Anchor**.

*“Impact windows don't mean much if your roof blows off !!!”*

See how it works! Watch the video at [www.HunkerBunkerRoofAnchor.com](http://www.HunkerBunkerRoofAnchor.com)

Hooks easily into a metal channel creating a strong grip.

**About the Developer**

Inventor and long time resident of Florida, Randy White has seen and experienced first-hand, the destruction that hurricanes can produce. Knowing that much of the damage is caused by roofs blowing off, he came up with a method of keeping roofs anchored more securely in place and therefore reducing the overall damage. He created an effective device, had it tested and contacted the Mars Rising Network. With their help a provisional patent application was filed and now this great idea is on it's way to production! He is actively seeking a company that would have an interest in licensing the product for a royalty.
